

EZ-Bulk 48x40 Tray Fold Fill Liner Instructions

Step 1

Use lid of the “EZ-BULK” as a work surface connect your fill hose.

Step 2

Maintain the fold of the liner during connection. Use a quick connect from Tri-Clover fittings to connect with the 2” NPT threaded fitment.

Step 3

Use your hand to reach through the bottom evacuation hole and lock in your bottom fitment with the collar provided

Step 4

Once connected, maintain the fold of the liner as you drop the liner to the bottom of the tote.

Step 5

Begin filling and allow roughly 3-4 inches of product to enter the liner, then gently pull on the four corners of the liner so all four corners are up. This will help seat the liner. Once the tote is half filled adjust the liner again.

Step 6

Fill the container to the top leaving roughly 1/2” space from the top edge. Do not under-fill the containers. Never stack under-filled containers.
